Andrew McKnight

resume@andrew.mcknight.io · https://mcknight.io

Experience

Sentry · Jan 2021 – Current
Senior Software Engineer · Remote (FTE)

- **Stack**: Objective-C++, Swift, Python, SwiftUI, Django, XcodeGen, CocoaPods, SPM, Carthage, Swiftlint, clang-format, CodeCov, pre-commit, Fastlane, Arkana, Claude Code, GitHub Actions, SauceLabs, TestFlight, Linear
- **Deliverables**
  - Sentry Cocoa SDK: mobile app crash and performance monitoring
    - Integrated Specto's profiler into Sentry's Cocoa SDK and iterated with new API/features
    - User Feedback widget: first user-facing UI shipped in Sentry Cocoa SDK
    - Built and maintained sample and demo apps for developers and Sales team
    - CI overhauls: parallelized long-running jobs, modularized suites, fixed state corruption issues, standardized fixtures
  - Seer for iOS and macOS: experimental apps interacting with our agentic offerings
  - SaaS Billing Platformization: helped overhaul the company's internal billing codebase to help product teams self-serve how they charge for their product segment

Specto · Nov 2019 – Jan 2021
Senior Software Engineer · Remote (FTE)

- **Stack**: Objective-C++, Swift, Go, Python, Protobuf, Jinja, XcodeGen, Bazel, GitHub Actions
- **Highlights**
  - First employee at startup; grew and maintained iOS profiling SDK
  - Joined Sentry as acquisition in December 2020; SDK integrated into Sentry Cocoa
- **Deliverables**
  - Specto SDK: mobile app profiling SDK
    - Shared C++ core between iOS and Android
    - Python scripts to generate scoped Xcode projects from Bazel targets (pre `rules-xcode`)
    - Added "safe init" to prevent crashloops, and launch profiling
    - Signal and mach exception propagation with open source contributions to other crash reporters
    - Smoke test generation validating integration across CocoaPods, Carthage, Bazel and SPM

Rightpoint Consulting · Jan – Oct 2019
Senior Software Engineer · Remote (Contract-to-Perm)

- **Stack**: Swift, SwiftGen, SwiftLint, Sourcery, CircleCI, Postman, Browserstack, Countly
- **Deliverables**
  - (Confidential): Identity security app and SDK

121nexus · Jan – Apr 2018
Software Engineer · Remote (Contract)

- **Stack**: Swift, AVFoundation, OpenCV, Firebase, cocoapods-keys, AWS
- **Deliverables**
  - 121 Scan: Medical inventory management app/SDK with custom barcode/QR scanning
    - Public launches via iTunes and a white-labeled internal enterprise app
    - Reimplemented major area of app with new UI and platform API
    - Added crash reporting (Crashlytics) and logging (XCGLogging)
    - Augmented and documented analytics (Firebase)

Layer · Dec 2016 – Jul 2017
Software Engineer · Remote (FTE)

- **Stack**: C, Objective-C, Swift, OCMock, Specta, Expecta, Rails, Thrift, WebSockets, SPDY, SQLite, CocoaPods, Jenkins
- **Highlights**
  - Rearchitected test suite to separate unit tests from integration/end-to-end tests
  - Streamlined developer environment configuration (Rake, Gems, CocoaPods and git submodules)
  - Migrated old SPDY/Thrift architecture to WebSockets with rewritten Thrift specs
  - Rearchitected auth and transport layers into state machines using TransitionKit
- **Deliverables**: SDKs for data and UI components, an embeddable app layer and fully-functional sample app

Twitter · Apr 2015 – Dec 2016
Software Engineer · Cambridge, MA (FTE)

- **Stack**: Objective-C, C, Swift, Java, Scala, Clojure, Coffeescript, Rails, React, Protobuf, Storm, Heron, Cascading, Scalding, Graphite, Beanstalk, Kafka, Redis, Cassandra, AWS, TeamCity, Chef, Trello, Vertica, Zeppelin
- **Highlights**
  - Presented work on rearchitectures at MobileDevCon 2016 in Amsterdam
  - Maintenance of backend lambda architecture, including on-call rotations
- **Deliverables**
  - Crashlytics SDK: Crash reporting SDK for Apple platforms
    - Rearchitected CLI tools that ship inside the framework for bootstrapping projects and uploading dSYMs
    - Added Bitcode and tvOS compatibility to SDKs, and investigated watchOS support
    - Pioneered new backend feature to cross-reference common crashes across apps and present developers with suggested fixes
  - Fabric SDK and macOS app
    - Assisted adding Unity iOS support
    - Streamlined build and release processes with TeamCity agents deployed via Chef
    - Rearchitected startup procedure using NSOperation, including custom async and compound operation implementations
  - FABConfig: Standardizes config of all Xcode projects and released the open source FABConfig
  - FABOperation: Custom NSOperation subclasses for async work and grouping tasks

MC10 · Jan – Apr 2015
Software Engineer · Cambridge, MA (FTE)

- **Stack**: Objective-C, Swift, CoreBluetooth, NSOperation, TeamCity, Fabric
- **Highlights**
  - Moved all existing demo code into Git repos, no previous SCM
  - Architected SDK and app codebases from the ground up
  - Set up continuous integration and deployment with TeamCity and Fabric
  - Assisted adoption of Agile processes, including delivering internal presentations
- **Deliverables**: Companion iOS app for clinical research wearable device

Raizlabs · Jul 2013 – Dec 2014
Software Engineer · Boston, MA (FTE)

- **Stack**: Objective-C, Swift, Jenkins, TeamCity
- **Deliverables**
  - Care.com: service seeker/provider marketplace
    - iOS 7 redesign, with perspective zoom effect for a horizontally paged scroll view

Raizlabs continued on next page

    - Dynamic UI generation from server-supplied data
  - B&H Photo: e-commerce app
    - Custom parallactic scrolling of table view headers
    - Push notifications with deep linking
    - UICollectionViews for device-specific layouts on iPhone and iPad
  - UniFirst: interactive enterprise sales catalog on iPad
    - Drag and drop editing of clothing selections on human models
    - Patch designer with logo image, font and layout customization
    - PDF generation for sales orders and reports
  - Invaluable: realtime high-end auction platform on iPad
    - Paging of API result display in table/collection views with custom pull-to-request footer and animation

ODU Systems Lab · Oct 2012 – May 2013
Software Engineer · Norfolk, VA (Student Intern)

- **Highlights**
  - Supervised two foreign exchange students
  - Consulting with clients on site
- **Deliverables**
  - ChirpXM: location based social networking app (defunct)
  - Prototyped EMR iPad app for CHKD

Old Dominion University · Aug 2012 – May 2013
Project co-lead · Norfolk, VA (Capstone Project)

- **Stack**: Objective-C, OpenEars, MapQuest
- **Highlights**
  - Co-lead of 7 member team that received highest score in the program
  - 4 presentations given to visiting professors and industry executives
  - Sole developer of iOS component of total solution

Insight Therapeutics · Nov 2011 – Jun 2019
Lead iOS Developer · Norfolk, VA & Remote (Contract)

- **Stack**: Objective-C, Swift, MessageUI, Storyboards, CoreGraphics, CoreData, FMDB, SQLite, SSZipArchive, RNCryptor, cocoapods-keys, Trello, BitBucket
- **Highlights**
  - Sole consulatation and development of multiple apps
- **Deliverables**
  - ClotRx: reference e-pamphlet about anticoagulants
    - Inherited from previous developer and extended by me
    - Hybrid app with UIWebView, modernized by me to use WKWebView
    - Added search and bookmark features
    - Added interactive clinical surveys with print/email report generation
  - DementiaRx: reference e-pamphlet about dementia
    - Automatic PDF extraction from original paper publication
    - New app created by me, including search, bookmarking and interactive elements which were then backported to the existing ClotRx app
  - Antibiotic Kinetics: antibiotic dosage calculator
    - Ported from another developer's preexisting Android app
  - eConsent: HIPAA-compliant informed consent app for clinical trial participants
    - Interactive quiz-based presentation of study details
    - Signature collection and export to PDF

Insight Therapeutics continued on next page

- Interface with backend API to upload finished consents
- Internal deployment only using enterprise signing
- Admin mode for managing database of completed documents

Education

Old Dominion University · 2013
M.Sc., Dept. of Computer Science

- Research in bioinformatics, robotics, image processing and 3D meshing
- Thesis: "Protein Loop Length Estimation from Medium Resolution CryoEM Images"
- Three published papers with two conference presentations
- C++ programming TA for three semesters

Old Dominion University · 2012
B.Sc., Computer Science

- Graduate-level versions of courses as part of the Accelerated Master's program
- Minor in actuarial mathematics

Presentations

iOSDevCampCO · May 2018
Colloquial Swift (45 min) · Colorado Springs, CO

- Presented findings from analysis of common function implementations in open source repositories as a way to generate possible Swift Evolution proposals

CocoaHeads Boston · Jun 2017
UIViewController Decomposition and UI Reuse (20 min) · MIT, Cambridge, MA

- Discussing strategies to separate responsibilities from UIViewControllers and a library of reusable UI components, e.g. animated transparent modal presentation with a close button

Boston Algorithms Meetup · Jan 2017
HyperLogLog (20 min) · Twitter, Cambridge, MA

- Helped organized this initial meeting of the group
- Covered the theoretical workings of the HyperLogLog algorithm, with a copresenter giving a working demostration

mDevCon · Mar 2016
Command and NSOperation (45 min) · Amsterdam, NL

- Delivered presentation on the Command software design pattern, and NSOperation
- Introduced subclasses we open sourced at Crashlytics for asynchronous and compound operations
- Previously delivered at a lunchtime tech talk at Twitter, Cambridge, MA (Nov 2015) and CocoaHeads Boston meetup, MIT, Cambridge, MA (Dec 2015)

Mentorship

Girls Who Code · Jul 2016
iOS Dev Session · Twitter, Cambridge, MA

- Part of GWC summer internship covering programming first principles to full-stack style development
- Designed and led iOS session where we built a Flappy Bird clone, introducing them to Xcode as an IDE, Interface Builder, Playgrounds and Swift

NeighborNest · Oct 2015
Web Dev Session · Twitter, San Francisco, CA

- Community program to help advocate technology literacy
- Assisted in session where students worked on a Twitter clone, teaching functional programming concepts, Javascript, and some front- and back- end concepts
